

Redefining video recording

Seon's feature-packed MX4 offers exceptional video recording, geo-fencing and real-time viewing capabilities. This high-performance DVR can simultaneously record 30 FPS with D1 (720 x 480) resolution on all channels.

The MX4 offers the recording of two information streams, one designed for high-resolution playback on a PC, and the other for real-time viewing over the web or GPRS network. Track vehicles and retrieve key details about an incident using video footage synchronized with mapping software.

Benefits:

- Supports 4 cameras with audio.
- Features MPEG-4 compression for outstanding image quality.
- Stores up to 750 GB for plenty of recording space.
- Records 30 FPS per camera at 720 x 480 (120 FPS aggregate).
- Alerts administrator if a vehicle leaves its designated area.
- Records two information streams utilizing dual stream technology – one stream for hi-res playback, and one for real-time viewing over a GPRS or other cellular network (with optional equipment).
- Includes a wake-on alarm which turns on the DVR in response to a vehicle break-in.
